

09 - The Crater. *Not a blasting fire entrance of an asteroid or a comet,*

The **Red Lines** are the **Crater**, and also all the **Active ocean floor** interaction around Earth, and due to its size and Earth's Rotation speed, it collapsed on itself, piling up on the west.

but a massive ice water volume drop, at what is today the Pacific Ocean. Probably by an ice body of a comet crushed and taken by Earth's Gravity. (the Pacific drop)

Show in **RED** Active Continental margins
Show in **YELLOW** Passive Continental margins

and the location of the elements like the volcanoes and the deepest places and the high mountain ranges, led us to draw a picture of this Crater as a result of the Pacific drop, expanding enormously in the Pacific side, else-where it shows only stretch marks with Passive Tectonics.

>> Earth's rotation direction >> over 1.600 km/hour >>

● Volcanoes around the World

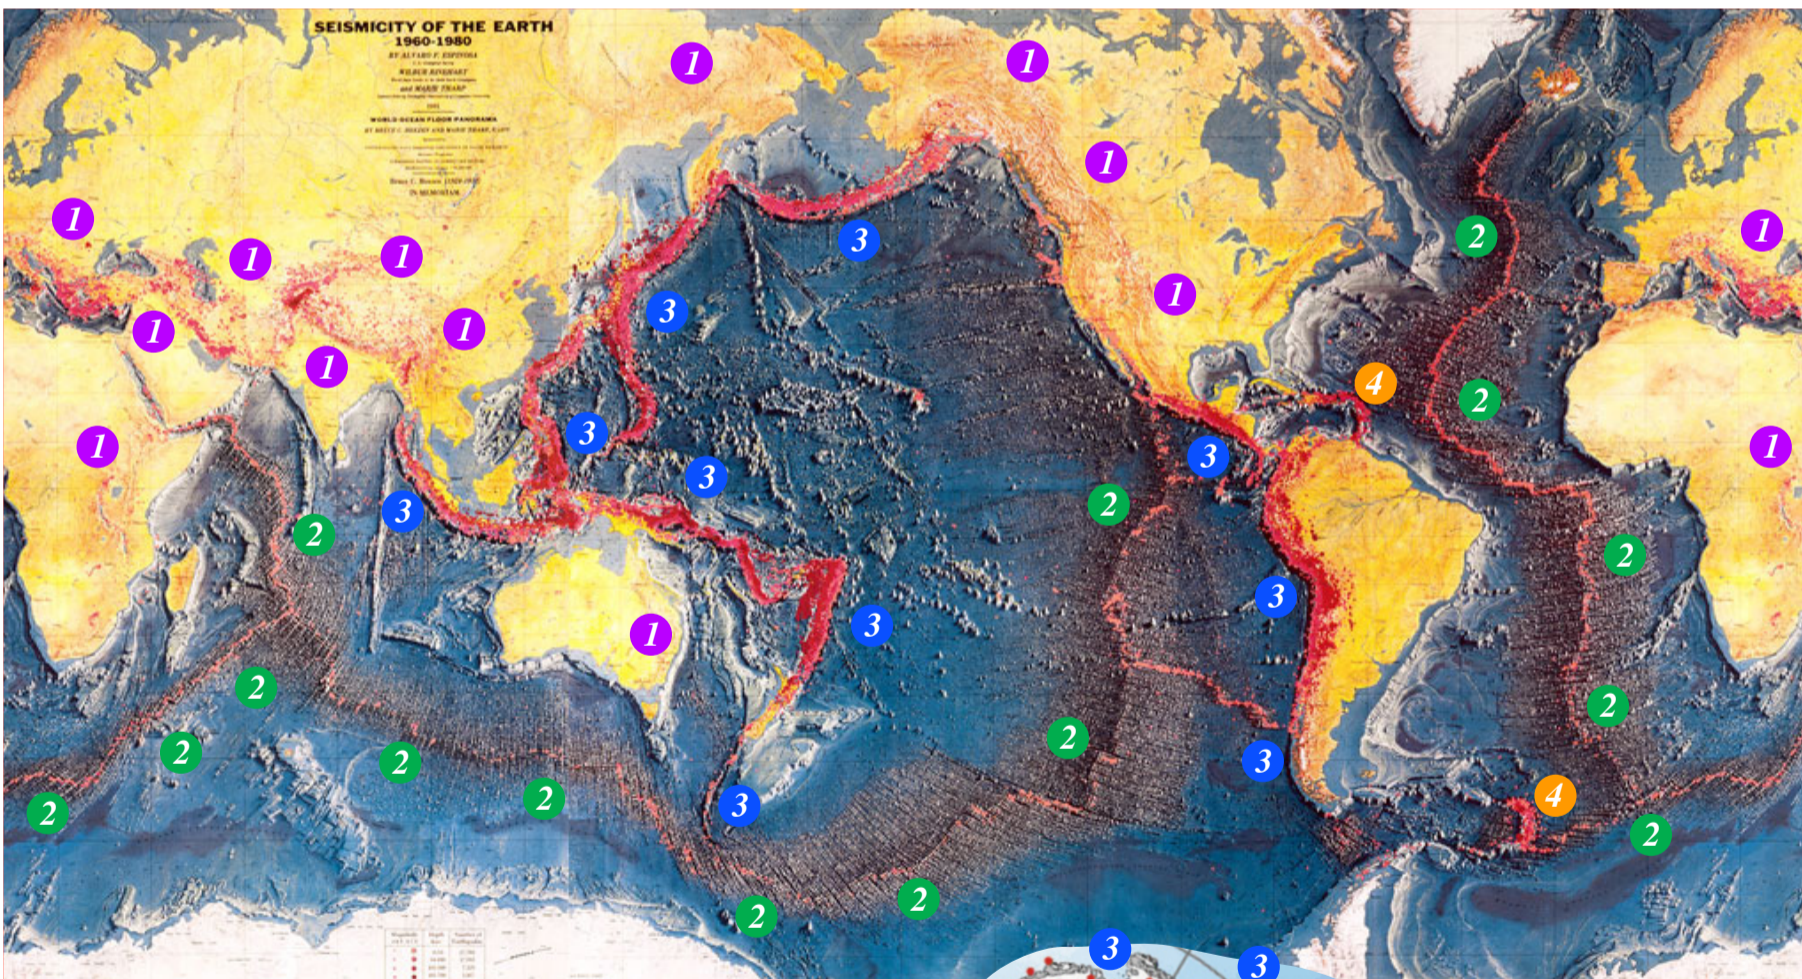

● Deepest places in the Ocean

● Mountain Belts

This map shows Volcanoes in **Red**, and 4 distinctive formats can observe, around different regions:

1 Volcanoes at the compressed crust, from the event

2 Volcanoes at the center of the stretch lines, most of it between the Passive Tectonics

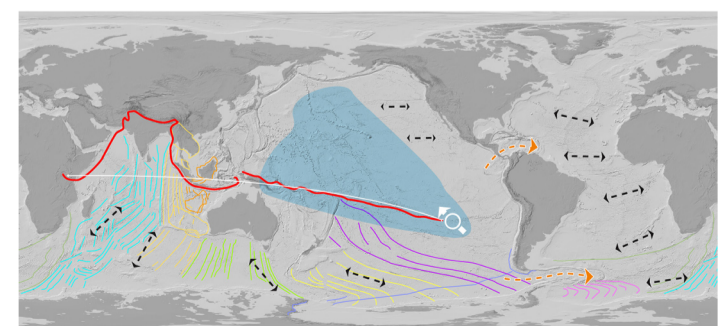

3 Volcanoes at borders of the crater, along with the Active Tectonics

4 Volcanoes at vortex ring edges

*Please note:
there are volcanoes even in Antarctica,
to complete the ring of fire.*

In order to see this event, you have to compare various maps, so doing that you can start to see a pattern, if you only analyze the tectonics, or the volcanoes alone, it will be very difficult to identify this event, once you start to combine various maps it becomes easy and clear how this event took place, the more you add the more you see, that's why we try to provide this patchwork of information regarding this event.

Maps and layers .psd in this Theory are available for download in the web site.
