## Dating the Pacific Drop Why is the current Dating Process misleading?

The Pacific drop event can't be dated by the current methods, because is not taken into consideration at least 3 major factors, according to this theory

Stretched by volume deposit

The Earth before the Pacific drop had a much easier topography, without the mountain ranges and carrying shallow oceans and rivers, crisscrossing the old crust.

The Pacific Drop, a large amount of water drop where is the Pacific Ocean today, probably by an ice comet, planet size.

this large deposit of ice water shuffles the od crust, creating the mountain belts, by folding the old crust and exposing ancient oceans to dry land, and creating the deep oceans, leaving behind the drag marks pattern in the deep ocean floor.

1. Crust Shuffle, folding and exposing the old crust in a geological puzzle, it can be noticed by observing the deep ocean floor drag marks pattern left by the event.

3. Earth's rotation changing to a lower speed and the Pole Shift upon the event.

The deposit provoke a slow down on the rotation speed

changing the pace of days, meaning the early days were shorter.

2. Gravity increase by a large volume dropped at the event.

Pole shift, a change on the Earth's axis

The Pole shift provoke a change in the ice cap's, what you might call today the end of the ice age.

Sumerin Kings list

\* Note: it also can help to understand the Sumerian king's list chronology as a reference, regarding the length of the years before and after the flood.

## "This is not an answer, this is a question!"

How will the current dating methods beave before the effects of this event around 10.000 years ago?

What took place:

Crust shuffle creating the deep oceans and a geological puzzle

A change from lower to higher gravity force by the volume deposit

Dating methods:

Fission Track Uranium -238 Relative **Dating** 

Potasiun-Argon

Radiometric **Dating** 

Carbon **Dating** 

Pole Shift upon the event

A flood and the ring of fire origin

Slower rotation

Paleomagnetic Stratigraphy

Argon-Argon

This event interferes with the currently dating process, therefore in this theory, the dating is estimated by events, the next papers will show some events that we collect to build a new chronology.
